

## THE SOLERGY LABEL FOR SOLAR THERMAL COLLECTORS IS NOW AVAILABLE IN NORTH AMERICA

ICC-SRCC and DIN CERTCO have partnered to expand the optional label to North America.

Berlin, Germany, October 16, 2023 – Since 2016, DIN CERTCO has been the designated certification body responsible for granting the SOLERGY collector label in Europe. The principal requirement to get the optional label involves holding a valid Solar KEYMARK certificate. As of the current moment, 23 manufacturers and distributors of flat plate, evacuated tube, and PVT collectors have obtained and registered the SOLERGY label through DIN CERTCO. A major milestone was achieved on September 26, 2023, with the Solar Rating Certification Corporation (ICC-SRCC) of the United States formally announcing the successful collaboration with DIN CERTCO to issue the SOLERGY label in North America.

The SOLERGY label helps consumers choose a sustainable and cost-effective solar thermal generator

The SOLERGY label joins the certifications and ratings of solar collectors that ICC-SRCC provides under the OG-100 program. Through the collaboration, manufacturers of solar thermal collectors can now apply to ICC-SRCC to obtain the SOLERGY label for any qualifying liquid-heating collector certified under the OG-100 program. ICC-SRCC then works with DIN CERTCO to develop the SOLERGY standardized performance ratings for North American climate zones and generate the SOLERGY consumer label. The label gives

an easy-to-read performance rating ranging from A- to AAA, showing the energy produced per unit area for different climates in North America, including Mexico, the United States of America and Canada. It also references the ICC-SRCC OG-100 certification, which provides additional performance information and compliance with regional minimum durability and safety requirements.

"We are pleased to be working with DIN CERTCO and the Solar Heating Initiative (SHI) to bring this product label to North America," says Shawn Martin, ICC-SRCC VP of Technical Services. "It can sometimes be difficult for consumers to appreciate the performance benefits that products like solar water heaters can bring. Tools like the SOLERGY label provide manufacturers with another option that works well with existing regional certifications like OG-100."

Ongoing collaboration between leading global solar thermal evaluation and certification bodies, like ICC-SRCC and DIN CERTCO, continues to yield benefits for manufacturers and consumers alike. "We are delighted to have found a great partner in ICC-SRCC, with whom the label can grow beyond European borders. We are convinced that the label will bring a great benefit to North America." remarks Dr. Ina Förster, Product Manager at DIN CERTCO.

Decarbonization is a paramount concern for various sectors, encompassing multinational corporations, with more than two-thirds of energy consumption in the industrial domain being attributed to heating purposes. "The SOLERGY label serves as an effective instrument for effortlessly showcasting the core function and versatility of solar thermal collectors: supply of clean heat and performance according to climate zone and temperature level" states Marisol Oropeza, Marketing and PR responsible of SHI.

The implementation of the SOLERGY label in further regions such as Oceania and Africa is planned as part of the activities to be performed in alliance with the Global Solar Certification Network (GSCN).
